LifeCare Hospitals of Dallas Completes Major Expansion and Renovation

Technologically advanced facility will address acute needs of medically complex patients

DALLAS, Texas (July 30, 2009) – LifeCare Hospitals of Dallas has completed the renovation and expansion of its 62-bed facility, which is designed and staffed to serve medically complex patients who require extended hospitalization. The improvements will be unveiled at a special open house event on July 30 at 5:30 p.m.

The newly renovated facility now includes a state-of-the-art, six-bed special care unit focused on the treatment of patients recovering from catastrophic illness or injury. In-house diagnostic services, including a CT scanner, a specialty procedure room, mobile fluoroscopy, and on-site ultrasound and computer radiography, also were added along with new private rooms and expanded nursing stations. Additional improvements include new flooring, paint and ceilings throughout the facility and enhanced patient amenities such as flat screen TVs in all patient rooms.

Typically, patients are transferred to LifeCare Hospitals of Dallas after a stay in an intensive care unit in a general acute care hospital. Patients often have experienced multiple system failures or a slow response to traditional medical treatments and require extended acute care management with intensive therapies and round-the-clock attention.

“Many months of planning have gone into this day, and we are thrilled to see our vision for a world-class complex care hospital come to life,” said Kathy Wallace, Chief Executive Officer of LifeCare Hospitals of Dallas. “Our expanded facility fills a truly unique role in the healthcare continuum, serving as an extension of our community’s acute care hospitals and providing critical care services for medically complex patients.”

Located at 6161 Harry Hines Blvd., LifeCare Hospitals of Dallas is part of the LifeCare family of hospitals. The LifeCare Hospitals network includes 20 specialty acute care hospitals in 10 states.
